

WHY ACRYLIC?

We at TidyUps love acrylic! The material is a little bit more expensive than ordinary plastic, but it has outstanding properties that have simply convinced us:

- Acrylic is unlike real glass very shatterproof and stable
- Acrylic has a brilliant optical effect, it's translucent and particularly UV-stable
- Acrylic is frost and heat resistant and does not become brittle
- Acrylic is well resistant to inorganic substances, acids and alkalis of low concentrations, salts and salt solutions.

How to make sure to enjoy the use of your acrylic organizers for a long time:

- The safest way to clean your box is to use warm water mixed with a mild detergent and a lint-free cloth
- Do not use alcohol or scrubbing cleanser as this would destroy the smooth surface
- Please handle the box with care and use an anti-static cloth to remove lint or dust easily
